APPLIED SCIENCES

# INTERNATIONAL CIVIL ENGINEERING B.Eng.

## OBJECTIVES

We provide broad knowledge in the areas of civil engineering, construction operations and construction management. Furthermore, we enable graduates to communicate effectively in several languages. The bachelor's degree program trains students for careers with international civil engineering and construction companies, as well as with government and international organizations.

## STUDY PATH

In the first two years the program follows the standard civil engineering bachelor's degree curriculum but each semester one module is taught in English. The course includes two semesters abroad at one of our partner universities during which students acquire valuable language and intercultural competencies. In a one semester internship students gain useful practical experience. Our program is the only civil engineering Bachelor's degree program in Germany that features an integrated year of study abroad.

## PERSPECTIVES

Graduates of the International Civil Engineering bachelor's degree program have a broad spectrum of career options. These include professions in the construction industry or in the public sector. Due to their distinctive language and intercultural competencies, graduates of this program can successfully work anywhere in the world.

## AT A GLANCE

### Start

winter and summer semester

### Duration
